

How to implement Authentication

We will be using JWTs as the standard for authentication. If you are not familiar with JWTs, please see <https://jwt.io/introduction/> (https://jwt.io/introduction/)

How to use JWTs' access_token ?

- Key placed in request header is x-access-token
- header['x-access-token'] = YOUR_JWT

How to implement avatar_url ?

You can implement this feature through Gravatar document <http://en.gravatar.com/site/implement/>

Should I implement all response header?

You don't need to implement these things(ETag , X-Request-Id) in response header. We only verify the response body and status.

Caution:

- Every access_token **expires after 10 minutes**. Once the access_token expires, you can use POST refresh API with refresh_token to get a new access_token

AccessTokens

Refresh JWT

Endpoint

POST /access-tokens/refresh

Parameters

Name	Description
refresh_token <div>required</div>	Refresh token of the existing user

Request

Route

POST /access-tokens/refresh

Headers

```
Content-Type: application/json
Host: example.org
Cookie:
```

Body

```
{
  "refresh_token": "the-token-str-2"
}
```

Response

Status

Headers

```
